Hobbies

- ➡ Jiu Jitsu, Philosophy(ethics & austrian economics), Trivium

Personal Statement

I believe that individual freedom is a necessary condition for happiness. Because of that I usually prefer to work in places where:

- The management structure is such that incentives are used instead of direct control
- The projects align with my core personal values of liberty and prosperity.

Those factors have the side effect of attracting to a company great professionals, and working with such people is one of my major career goals.
