Recent Professional Experience

[1]

2015-05 - 2015-07   ➥ **Consultant at nubank** – Devops and systems programming.

2013-06 - 2015-02   ➥ **Engineer at agri esprit** – Developed rich web interfaces using common lisp and modern javascript.

2012 - 2013-06   ➥ **Engineer at stackbuilders** – Used clojure to connect remote banking services, and to build a real time simulator for interactive lighting installations.

2010 - 2012   ➥ **Research Engineer** – Helped build the R&D team at neoway and led it in creating a captcha recognition system.

2007-2009   ➥ **Web Developer** – Web freelance developer, mostly focused on using ruby on rails.

2005 - 2007   ➥ **Research Engineer** – GUI developer for a PKI software at the infosec laboratory at my university.

Personal Statement

I believe that individual freedom is a necessary condition for happiness. Because of that I usually prefer to work in places where:

- The management structure is such that incentives are used instead of direct control
- The projects align with my core personal values of liberty and prosperity.

Those factors have the side effect of attracting to a company great professionals, and working with such people is one of my major career goals.
